

Ever Full of Sap Part 3

Are we storing potential energy?

In "Ever Full of Sap Part 3," we emphasized the connection between faith, labor in God's word, and the transformation of potential energy into kinetic energy. **Here are the key takeaways:**

Potential Energy in the Word of God:

- The Word of God contains potential energy, like stored power waiting to be released.
- This potential energy is released through action—specifically through faith and obedience, transforming it into kinetic energy.
- Just as Makenna applied what she learned to help her friend; Christians must apply God's word to turn potential into results.

Importance of Labor:

- Highlighted was the need for consistent labor in studying and applying the Word of God, likening it to maintaining spiritual nourishment.
- Salvation and righteousness are free gifts, but they require maintenance through labor, as shown in *Philippians 2:12* ("work out your own salvation").
- The righteous flourish like trees because of their labor in developing a strong "root system"—a study system based on God's word.

Root System:

- Like a tree, Christians need a solid root **system**, which represents their study and spiritual discipline.
- The root system provides stability, nourishment, and growth, leading to flourishing in God's courts, as described in *Psalms 92:12-15*.
- Without spiritual roots (like a Christmas tree without roots), a person cannot thrive.

Practical Application:

- God's word is like potential energy that must be applied to bear fruit.
- Emphasized was the importance of studying and turning that study into action, using faith to move situations and release blessings, just as demonstrated on our cruise.

Conclusion:

The teaching encourages believers to cultivate a disciplined study life, allowing the Word of God (**potential energy**) to be transformed into action and results (**kinetic energy**) through faith. This is the labor required for flourishing in righteousness.
